

# Chapter 1

## Multiple Codeblocks

# Using pandas  
Let's import pandas:

```
1 import pandas as pd
```

We can create a `**dataframe**` like this:

```
1 df = pd.DataFrame(data={"Animal": ["Cat", "Dog"],  
2                        "Name": ["Zoya", "Hash"]})
```

That's it!
