

Chapter 1

Multiple Codeblocks

1.1 Using pandas

Let's import pandas:

```
1 import pandas as pd
```

We can create a **dataframe** like this:

```
1 df = pd.DataFrame(data={"Animal": ["Cat", "Dog"],  
2                        "Name": ["Zoya", "Hash"]})
```

That's it!
